# Wood County Well Location Permit Application

(R 12/2021)

Well located on highest point of property?  Yes  No

- Separation distance from well as required by s. NR 812.08 (as of 7-1-20):
- Nearest Well, 8 ft.
  - Landfill Site, 1,200 ft.
  - Septic/Holding Tank, 25 ft.
  - Soil Absorption Unit:
    - < 12,000 gal/day, 50 ft.
    - < 12,000 gal/day - school wells, 200 ft.
    - ≥ 1,200 gal/day, 250 ft.
  - Pit or Alcove - Noncomplying, 8 ft.
  - Buried Fuel Oil Tank – Residential, 25 ft.
  - Buried Petroleum Tank – Other, 100 ft.
  - Shoreline, 25 ft.
  - Swimming Pool, 8 ft.
  - Privy – pit, 50 ft.
  - Privy – vault, 25 ft
  - Building Drain, 8 ft.
  - Building Sewer, 8 ft.
  - Collector Sewer, 25 ft.
  - Wastewater Sump – Watertight, 8 ft.
  - Wastewater Sump – Not Watertight, 25 ft.
  - Animal Barn Pen, 50 ft.
  - Kennel < 5 pets, 8 ft.
  - Kennel > 5 pets, 50 ft.
  - Silo, 50 ft.
  - Manure Sewer, 25 ft.
  - Manure Sewer > 6-inch dia., 50 ft.
  - Manure Storage:
    - Loading Area, 50 ft.
    - Earthen Stack - Excavated or Non-Liquid tight, 250 ft.
    - Temporary Stack, 150 ft.
    - Liquid Tight Structure, 100 ft.
  - Other

Scale: \_\_\_\_\_ in. = \_\_\_\_\_ ft.

**COUNTY WELL LOCATION PERMIT APPLICATION FORM INSTRUCTIONS**

**NOTICE:** This form is authorized by ss. 59.70(6) and 280.21, Wis Stats., and chs. NR 812 and 845, Wis. Adm. Code, and Wood County Ordinance #708. Completion of this form is mandatory. Failure to submit a completed form to the county is punishable by forfeiture, injunction or both, according to county ordinance. Each day of continued violation is a separate offense. Personally identifiable information on this form is not intended to be used for any other purpose.

**GENERAL INFORMATION:**

1. The use of this form is required in counties that have been delegated regulation of private well location.
2. Variances from the minimum location distances in ch. NR 812 can only be granted by the Department of Natural Resources. Variances are only granted when it is impractical or impossible to provide the minimum separation distances. Please contact your DNR district offices, for variance information.
3. Either the property owner or the property owner's designated agent can complete the well application. The permit must be signed by the property owner or the property owner's designated agent.
4. A county permit is required for:
  - a. driven point, drilled and dug wells whether constructed by a licensed well driller, driven point well constructor or property owner.
  - b. all new or newly reconstructed wells and replacement wells.
  - c. all potable private and noncommunity wells.
5. A county permit is not required for high capacity water systems, school water systems, wastewater treatment plant water systems, and water systems or installations requiring written plan approval from the DNR.
6. The applicant must complete and submit the form to the county at least 2 working days before constructing the well if the owner or well constructor is interested in receiving information about potential contamination sources such as landfills; underground storage tanks; primary and replacement on site sewage disposal system areas on the development site and on adjacent properties; and special casing areas.
7. Well construction may proceed immediately without the required county permit provided the property owner or the property owner's designated agent gives notice to the administrator prior to construction. Unless other arrangements are made with the administrator the permit must be applied for on the first work day following initial construction.
8. When construction occurs on a weekend or holiday, notification to the administrator shall be provided on the first work day following the weekend or holiday. Unless other arrangements are made with the administrator, the permit application shall be obtained on the first work day following the weekend or holiday.

**HOW TO COMPLETE THE APPLICATION:**

1. Press hard and write legibly using a ball point pen or use the form-fill electronic version on the Wood County Website.
2. The applicant must complete all information requested on the application.
3. If there is a question as to what information is requested, contact county staff.
4. Send or deliver the form and \$125.00 permit fee to the county. Applicants will receive the 3rd copy of the approved application form and the on-site permit placard to post at the well site. The well constructor must fill out a combined water sample/well construction report after the well is finished. When the well is constructed by the owner, or a driven point well is constructed, the county will provide the property owner a combined water quality/well construction report to fill out and submit. Licensed well drillers will receive the combined forms from the DNR.
5. The property owner or the property owner's designated agent may be required to notify the county that the well is completed within 10 days of construction.
6. A site development plan may be required by the county. The applicant can include a copy of either the building or the sanitary plan, which shows the location of the proposed well, the dimensional locations of all known above and below grade structures, and the location of sewer lines, septic tanks and the primary and alternate drainfields on the property and on adjacent properties. If these plans are not available the applicant may need to prepare a site development plan that shows the above items.

**IF AN ERROR OCCURS:**

1. Mistakes, tears or rips, and legibility. Carbonless paper is hard to correct. Either use a new form or put a new value next to the old illegible value on all 3 copies of the form.
2. Loss of application form. Contact the county. If the permit has not been approved they will give you a new permit application. If the permit was approved, the county will send you a copy of the approved permit application.

**THE PURPOSE OF COUNTY WELL LOCATION PERMIT SYSTEM:**

1. Assures that precautions are taken to avoid potential contamination sources.
2. Helps prevent water contamination in your well from present and future contamination sources.
3. Helps to maintain an accurate record of every private well's unique geologic environment and its initial water quality so that any subsequent water quality changes can be compared during the life of your well.
